Mobile Web Access for Logistics

What is Mobile Access For Logistics

Mobile apps for logistics are browser-based web access or client/server applications on smartphones, iPads, tablets, and other mobile handheld devices.

These applications enable users to connect to Army log databases without the use of computers.

Why Mobile Access For Logistics

- Potential for improving access to information and increase Army readiness.
- Provide Soldiers fast and easy mobile access to logistics information so they can do their job more efficiently and effectively.
- Current opportunity for the Army to leverage mobile access for military applications.

What We Have Done

EPIC Mobile Access

- Browser-based access that works with iPhone, Android, iPad, Tablets, and Blackberry to the EPIC server with AKO authentication.
- Searches ALARACTs and Policies.
- Provides a cross-functional view of policy, showing inter- and intra-discipline (Maintenance/Supply/Distribution) relationships by keywords to paragraph level.

Army Mobile LOG Access

- Browser-based access that works with iPhone, Android, iPad, and Tablets to the LIW(FWD) server with AKO authentication.
- Functions include 'DOCNO Status', 'Find Me-NIIN', 'Check My UIC Job Orders', 'Check My DoDAAC', and 'MWO Status'.
